

Roads, Paths & Trails - Electric Shuttle Tracks

Guests will be able to drive to their accommodation and park next to the building for their convenience, but the roads will not facilitate driving around the resort - guests will be encouraged to use the covered electric shuttle buses. Special interfaces controlled by automatic electronic barriers will be incorporated between roads to allow our shuttles to circle the resort efficiently & stop to pick up passengers.

NB: All thoroughfares will be either surfaced with porous or permeable materials to eliminate or reduce water run-off.

Bus Stops

One Track for each wheel, barriers will control two way travel

Raised central island to dissuade other vehicles

Automatic barriers activated by the shuttles
